University of Veterinary Medicine, Vienna, Austria

Vienna/London, November 2011

Dear Colleagues!

It is a great pleasure for us to announce the 2nd "International Symposium on protozoal infections in poultry" which will be organized as a joint project between our two organisations.

Progress in science and transfer of knowledge towards practical application relies heavily on exchange of information between people working and interested in the same research areas. The intention of this symposium is provide a focus for colleagues wanting to look at, and engage with, the bigger scientific pictures, the main encouragement for us to organize the meeting again after a successful symposium in 2007.

Changes in legislation and husbandry continue to have a high impact on the incidence and severity of protozoan infections in poultry, as demonstrated for *Eimeria* and *Histomonas meleagridis* and these provide an obvious focus of attention. In addition, other less well known protozoan parasites will also be considered by our symposium.

The overall purpose of the symposium is to provide a timely focus on the biology; diagnosis; treatment and prophylaxis of protozoal infections in poultry during a time of great scientific and technical innovation.

Please find attached the necessary forms for registration and organization of your stay. We are looking forward to welcome you in Vienna in July 2012.

Fiona Tomley
(Chair of Experimental Parasitology)
