

Guest lecture:

“Functional laterality in pigs: interactions with personality and emotions”

Charlotte Goursot

Leibniz Institute for Farm Animal Biology (FBN) - Institute of Behavioural Physiology

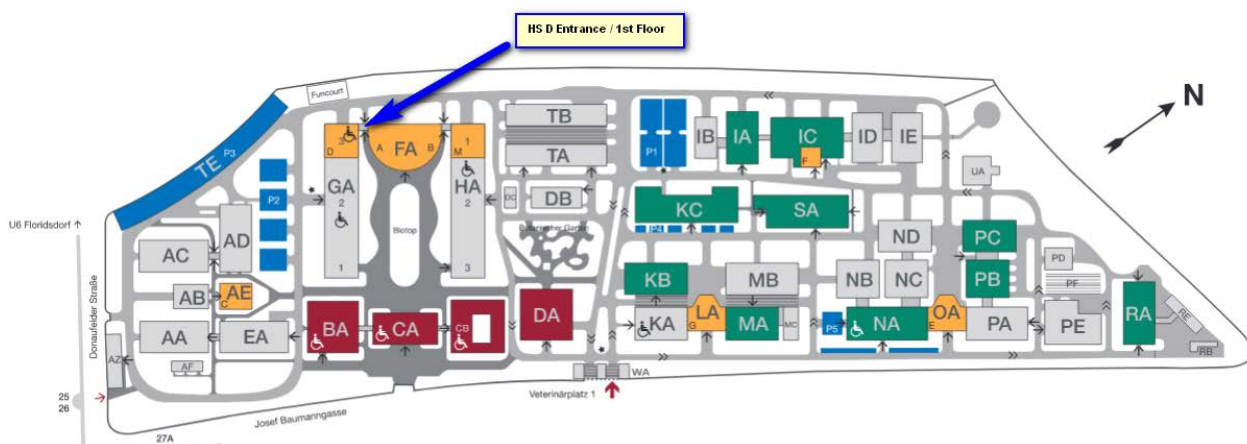

Charlotte Goursot has graduated from her veterinary studies in Paris (DVM) and after that, she became interested in behavioural biology research. For this, she did her Master in Strasbourg in Ethology and Ecophysiology (MSc); her Master's thesis was on the cooperation skills of the Keas (in Vienna, supervised by: Gyula Gajdon, Thomas Bugnyar and Ronald Noe). After that, she decided to specialize in research for livestock, because well-being is an important issue for her. Therefore, she started a PhD thesis in FBN Dummerstorf about the laterality of the domestic pig. In this guest-lecture, she will present her research results.

18.09.2019, 12:00-13:00 Uhr

Hörsaal D / Gebäude GA

Vetmeduni Vienna (Veterinärplatz 1, 1210 Wien)

Lageplan der Veterinärmedizinischen Universität Wien

No entrance fee, no registration necessary!
